Amendments to the Claims:

Without prejudice, this listing of the claims replaces all prior versions and listings of the claims in the present application:

Listing of Claims:

1. (Currently Amended) A system for utilizing at least one tender <u>created by a tender initiator</u>, comprising:

a storage device storing data which relates to the at least one tender; and a processing device transmitting information corresponding to the data, wherein the at least one tender is provided for a complex multi-variable commodity, the processing device further enabling [[a user]] a tender recipient to request an exception to create or modify a term of the at least one tender,

wherein [[the complex multi-variable commodity is a particular commodity whose price determination is based on a variation of a plurality of variable characteristics regarding]] the term of the at least one tender that is created or modified by the exception relates to a physical characteristic of the particular commodity.

2. - 3. (Canceled)

- 4. (Original) The system according to claim 1, wherein the processing device executes a program on a remote device.
- 5. (Original) The system according to claim 1, wherein the storage device includes a database storing data which is related to the at least one tender.
- 6. (Original) The system according to claim 5, wherein the database is a relational database.
- 7. (Canceled)
- 8. (Original) The system according to claim 1, wherein the processing device:

receives the data,

analyzes the data, and

transmits the information to a further processing device,

wherein the information is transmitted in response to the received data.

3

NY01 985423 v1

- 9. (Original) The system according to claim 1, wherein the processing device at least one of transmits and receives the information electronically via the Internet.
- 10. (Original) The system according to claim 1, wherein the processing device at least one of transmits and receives information electronically via a network of further processing devices.
- 11. (Currently Amended) A method for utilizing at least one tender created by a tender initiator, comprising the steps of:

receiving data for the at least one tender, the at least one tender being provided for a complex multi-variable commodity;

transmitting information corresponding to the data to a device; and accepting [[user]] input from a tender recipient for generating an exception to create or modify a term of the at least one tender,

wherein [[the complex multi-variable commodity is a particular commodity whose price determination is based on a variation of a plurality of variable characteristics regarding]] the term of the at least one tender that is created or modified by the exception relates to a physical characteristic of the particular commodity[[,

wherein at least one variable characteristic is a physical characteristic of a particular commodity]].

- 12. 14. (Canceled)
- 15. (Original) The method according to claim 11, wherein the data is at least one of received and transmitted electronically via the Internet.
- 16. (Original) The method according to claim 11, wherein the data is at least one of received and transmitted electronically via a network of processing devices.
- 17. (Currently Amended) A system for utilizing at least one tender created by a tender initiator, comprising:

a storage device storing data which relates to the at least one tender; and a processing device transmitting information corresponding to the data, and enabling a [[user]] tender recipient to request an exception to create or modify a term of the at least one tender,

4

wherein the term of the at least one tender that is created or modified by the exception relates to a physical characteristic of a particular commodity [[the at least one tender includes at least one of a term and a condition, and

wherein the term and the condition are capable of being modified]].

- 18. (Canceled)
- 19. (Original) The system according to claim 17, wherein the processing device executes a program on a remote device.
- 20. (Original) The system according to claim 17, wherein the storage device includes a database storing data which is related to the at least one tender.
- 21. (Original)The system according to claim 20, wherein the database is a relational database.
- 22. (Original) The system according to claim 17, wherein the processing device:

receives the data,

analyzes the data, and

transmits the information to a further processing device, wherein the information is transmitted in response to the received data.

- 23. (Original) The system according to claim 17, wherein the processing device at least one of transmits and receives the information electronically via the Internet.
- 24. (Original) The system according to claim 17, wherein the processing device at least one of transmits and receives information electronically via a network of further processing devices.
- 25. (Canceled)
- 26. (Currently Amended) A method for utilizing at least one tender <u>created by a tender initiator</u>, comprising the steps of:

5

receiving data for the at least one tender; and transmitting information corresponding to the data; and accepting from a tender recipient a request for an exception to create or modify a term of the at least one tender,

wherein the term of the at least one tender that is created or modified by the exception relates to a physical characteristic of a particular commodity [[the at least one tender includes at least one of a term and a condition, and wherein the term and the condition are capable of being modified]].

- 27. (Canceled)
- 28. (Original) The method according to claim 26, wherein the data is at least one of received and transmitted electronically via the Internet.
- 29. (Original) The method according to claim 26, wherein the data is at least one of received and transmitted electronically via a network of processing devices.
- 30. 34. (Canceled)
- 35. (Currently Amended) A set of instructions residing in a storage medium, the set of instructions capable of being executed by a processor to implement a method for utilizing at least one tender <u>created</u> by a tender <u>initiator</u>, the method comprising the steps of:

receiving data for the at least one tender, the at least one tender being provided for a complex multi-variable commodity;

transmitting information corresponding to the data to a device; and accepting from a tender recipient a request for an exception to create or modify a term of the at least one tender, wherein the complex multi-variable commodity is a particular commodity, and wherein the term of the at least one tender that is created or modified by the exception relates to [[whose price determination is based on a variation of a plurality of variable characteristics regarding]] a physical characteristic of the particular commodity.

- 36. (New) The system according to claim 1, further comprising: an arrangement to enable the tender initiator to reject the exception.
- 37. (New) The method according to claim 11, further comprising: enabling the tender initiator to reject the exception.

- 38. (New) The system according to claim 17, further comprising: an arrangement to enable the tender initiator to reject the exception.
- 39. (New) The method according to claim 26, further comprising: enabling the tender initiator to reject the exception.
- 40. (New) The set of instructions according to claim 35, further comprising: instructions to enable the tender initiator to reject the exception.
